**deadlock** Unresolved contention for the use of a resource. In APPN, when two elements of a process each wait for action by or a response from the other before they resume the process.

**DECnet** A group of communications products (including a protocol suite) developed and supported by Digital Equipment Corporation. The most recent iteration is DECnet Phase V, which is largely based on the OSI protocols.

**DECnet routing** Introduced in DECnet Phase III, Digital's proprietary routing scheme. In DECnet Phase V, DECnet completed its transition to OSI routing protocols (ES-IS and IS-IS).

**dedicated line** A communications line that is not switched. When the line is not owned by the user, the term *leased line* is more common.

**de facto standard** A standard by usage rather than official decree; a default standard.

**default route** Routing table entry that is used to direct any frames for which a next hop is not explicitly listed in the routing table.

**de jure standard** A standard by official decree.

**delay** The time between the initiation of a transaction by a sender and the first response received by the sender. Also, the time required to move a packet from source to destination over a given path.

**demarc** Demarcation point between carrier equipment and private telephone equipment (CPE).

**demodulation** Process of returning a modulated signal to its original form. Modems perform demodulation by taking an analog signal and returning it to its original (digital) form.

**demultiplex** To separate from a common input into multiple output streams.
